## Einleitung

Mit dem Ziel einen kontinuierlichen Verbesserungsprozess im Rahmen der vertragsärztlichen Versorgung von Dialysepatienten zu etablieren, wurde im Jahr 2007 die Qualitätssicherungs-Richtlinie Dialyse (QSD-RL) des Gemeinsamen Bundesausschuss (G-BA) eingeführt. Seither ist eine vergleichende externe Qualitätssicherung verpflichtend.

In 2013 hat der G-BA die QSD-RL im Hinblick auf eine zukünftige Längsschnitt-Datenerfassung überarbeitet (Banz AT 06.11.2013 B1). Eine am Behandlungsverlauf der Patienten orientierte Qualitätssicherung ist somit (theoretisch) möglich. Voraussetzung hierfür ist ein Patientenbezug und das Zusammenführen der quartalsweise erfassten QS-Daten.

Für die vom Berichtersteller gesammelten Benchmarkingdaten erfolgt dies einmal jährlich durch Übertragung aller Daten aus einem Berichtsjahr an den Datenanalysten.

Die Quartalsübertragung für das Berichterstellerbenchmarking erfolgt verschlüsselt über die jeweilige KV an die Vertrauensstelle und von dort verschlüsselt und patientenpseudonym an EuClID als Berichtersteller (Datenfluss nach QSD-RL Abschnitt III und Anlage 8).

**Der vorliegende Bericht wurde speziell für die an EuClID teilnehmenden Einrichtungen erstellt. Er enthält eine Übersicht zu allen Einrichtungen die am EuClID-Berichtersteller-Benchmarking teilnehmen ohne Berücksichtigung der KV-Zuständigkeitsbereiche. Der Bericht basiert auf Querschnittsanalysen der Daten aus vier Quartalen eines Jahres. Er folgt in der Reihenfolge der Darstellung den Vorgaben den Anlagen 4 und 7A der QSD-RL.**

Die Benchmarkingdaten umfassen: Alle Parameter zur Berechnung des spKt/V (nur bei HD Patienten), Serumalbumin, Hämoglobin, Kalzium, Phosphat, Parathormon (verpflichtend in Q2 und Q4), C-reaktives Protein, Wochendosis ESF (EPO), Komorbiditäten, Körpergröße bei Kindern, Zugangsassoziierte Infektion (nur bei HD Patienten), Infektiöse Peritonitis (nur bei PD Patienten).

Auch wenn wegen der strikten Vorgaben wenig Spielraum für die Gestaltung des Berichts besteht, würden wir uns über Vorschläge zur Weiterentwicklung freuen.

Dieser Bericht wird Ihnen vom EuClID Service der Fresenius Medical Care GmbH zur Verfügung gestellt.

## Methoden

### Patienteneinschluss

Die Auswertungen beziehen sich grundsätzlich auf alle Behandlungsfälle mit Hämodialyse (HD) von ständig dialysepflichtigen Patienten und auf alle Behandlungsfälle mit Peritonealdialyse (PD) mit dokumentierten Werten.

Die Grundlage für alle Auswertungen bilden alle Behandlungen von ständig dialysepflichtigen Patienten, bei denen die Dialysebehandlung im Berichtsquartal nicht erstmalig begonnen worden ist. Sofern Einschränkungen in der Grundgesamtheit notwendig sind, sind diese bei der Beschreibung der einzelnen Parameter ausgewiesen.

### Darstellung der Ergebnisse

Soweit nicht anders angegeben, sind alle Ergebnisse als Mittelwert (arithmetisches Mittel, MW) über die einzelnen Einrichtungen und über alle Einrichtungen mit Standardabweichung (SD) dargestellt.

### Tabellen

Die Einrichtungen sind mit Hilfe des vergebenen Einrichtungskennzeichens sortiert nach den Ergebnissen des 4. Quartals zeilenweise dargestellt. Der Gesamtwert aller Einrichtungen ist "blau" unterlegt und in die Sortierung integriert. Die eigene Einrichtung ist "gelb" unterlegen.

### Grafiken

Die Ergebnisse sind in Form eines Liniendiagramms im Verlauf der 4 Quartale eines Jahres dargestellt. Die gelbe Linie repräsentiert den Mittelwert der adressierten Einrichtung. Der Mittelwert aller Einrichtungen ist blau dargestellt.

Der Mittelwert aller Einrichtungen ist als horizontale "blaue" Bezugslinie dargestellt.

### Plausibilität und fehlende Werte

Parameter mit unplausiblen Werten in den eingegangenen Daten wurden von den weiterführenden Analysen ausgeschlossen. Nur Werte innerhalb u.g. Intervalle (plausible Werte) wurden in die Analysen eingeschlossen. Der Anteil ausgeschlossener unplausibler Werte wird in diesem Bericht nicht aufgeführt.

C-reaktives Protein mit Werten unterhalb der Nachweisgrenze fließen mit dem Wert der 1/2 Nachweisgrenze ein, z. B. bei einer Angabe von <5 wird der Wert 2,5 für die Mittelwertberechnung angenommen.

Darüber hinaus werden Patienten, deren spKt/V nicht berechnet werden kann, unter unplausiblen Werten aufgeführt. Diese ist der Fall, wenn folgender Ausdruck in der Daugirdas-Formel  $\leq 0$  ergibt:  $(\text{postdialytischer} / \text{prädialytischer Harnstoff}) - 0.008 * \text{Behandlungszeit}$ .

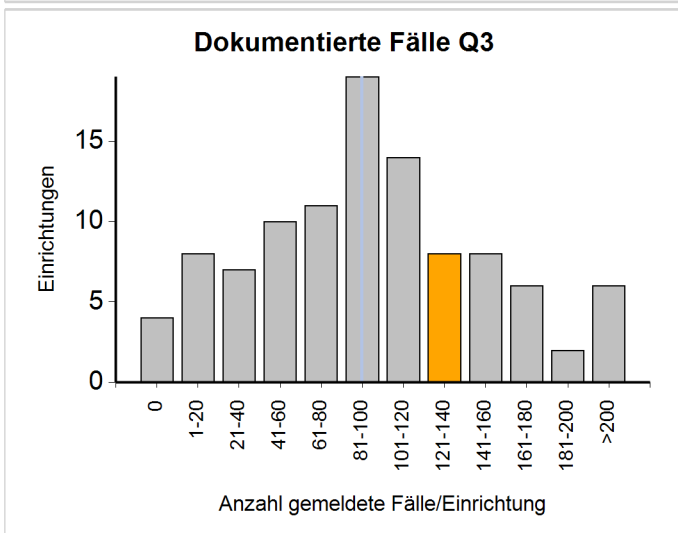

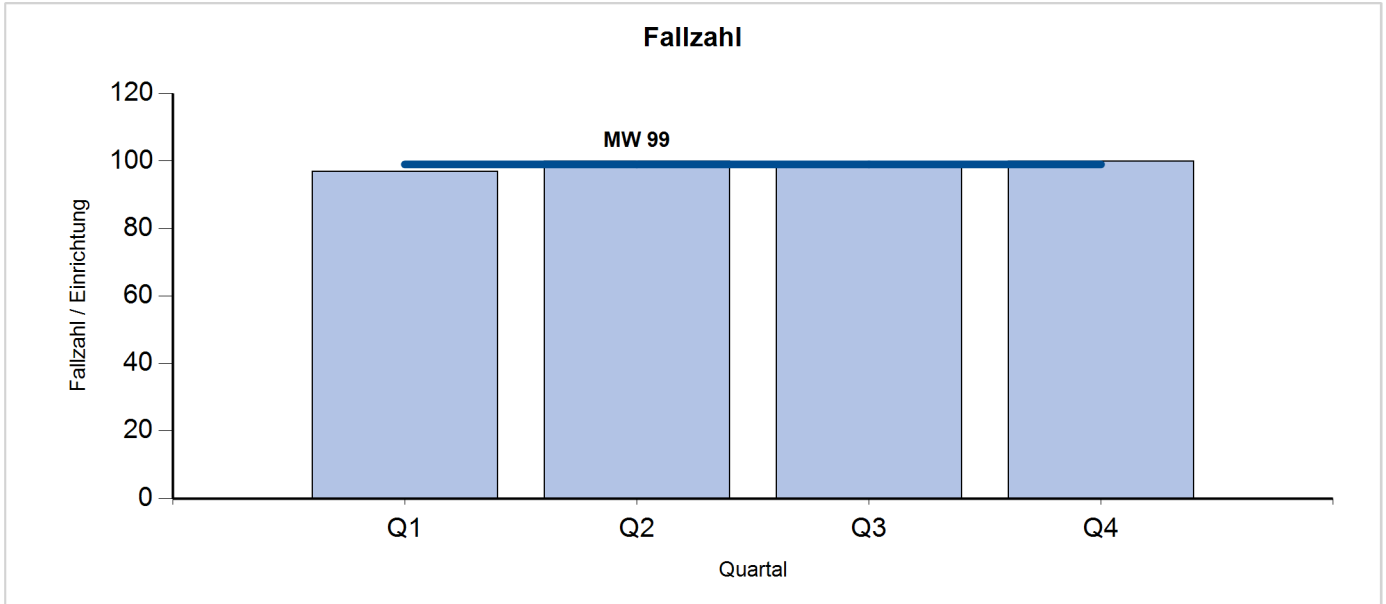

Folgende plausiblen Intervalle gemäß Anlage 4 der QSD-RL (zuletzt geändert am 20. Juni 2013) wurden verwendet. Die vom G-BA spezifizierten Plausibilitätsgrenzen schließen medizinisch unplausible Werte nicht aus, werden dennoch gem. Richtlinie in die Auswertung eingeschlossen.

- Albuminwerte zwischen 5,0 bis 60,0 g/l
- Hämoglobinwerte zwischen 3,0 bis 20,0 g/dl
- Kalziumwerte zwischen 0,2 und 3,5 mmol/l
- Phosphatwerte zwischen 0 und 4,5 mmol/l
- Parathormon zwischen 0,0 und 5000 ng/l
- C-reaktives Protein <1000,0 mg/l (keine Werte über 1000,0 mg/l)
- postdialytischer Harnstoff zwischen 1,0 und 500,0 mg/dl
- prädialytischer Harnstoff zwischen 1,0 und 500,0 mg/dl
- prädialytisches Körpergewicht zwischen 1,0 und 250,0 kg
- postdialytisches Körpergewicht zwischen 1,0 und 250,0 kg
- Wochendosis ESF gleich 0 (wenn kein ESF) oder 500 bis 40000 IE (nach Umrechnung der präparatspezifischen Dosisangaben in vergleichbare IEs: 1µg Darbepoetin = 200 IE, 1µg Mircera = 229 IE)
- UF (prädialytisches minus postdialytisches Körpergewicht) zwischen 0 bis 8,0 kg
